TOKENOMICS

The Nakamoto Tokens have a fixed supply, meaning no additional tokens will be minted in the future. This approach ensures scarcity and value preservation for token holders. Liquidity is provided through decentralized exchanges, allowing holders to trade the token freely and securely.

To ensure trust and transparency, the project team has renounced ownership of the token contract. By doing so, the project is entirely community-driven, placing power and decision-making authority in the hands of the token holders.

To align incentives and foster trust, Scotty The AI does not allocate tokens to the team. This ensures that the project's success and growth are driven by the active participation, engagement, and support of the community.
